

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Inventor : Mitchell R. Swartz

Serial no. 09/ 750,765

Filed: 12/28/00

For: **METHOD AND APPARATUS  
TO CONTROL ISOTOPIC FUEL  
LOADED WITHIN A MATERIAL**

This is a continuation of Serial no. 07/ 760,970

Group Art Unit: 3641

Examiner: Mr. Palabrica, R.J.

April 21, 2004

**DECLARATION OF GAYLE VERNER**

I, Gayle Verner, wish to make the following statement:

1. I am a citizen of the United States of America and resident of the Commonwealth of Massachusetts. My field of experience is that of a journalist, educator, and a science writer. I am nationally published in a number of technical publications and many mainstream magazines and journals, as well as having written extensively on many subjects.

2. I have reviewed the above-entitled application in general, and the relevant papers and Exhibits in particular, including the Office's communication dated March 31, 2004. (cover as Exhibit "A", attached), which is stamped and unsigned by Michael Carone and typed by the Examiner. Said office communication alleges that there are errors in the Appeal Brief dated January 4, 2004. It appears that it is the Office which has made a series of errors with respect to these matters.

3. The independent claims have been fully discussed in the Arguments section, and there is a specific reason why EACH independent claim is present. The citations were given in Appellant's previous Notification,

" it is explicitly discussed on page 22 of the Argument section for 35 U.S.C. 112 (first paragraph), and then on page 92 of the Argument section for 35 U.S.C. 112 (second paragraph), and then on page 99 of the Argument section for 35 U.S.C. 102, and then on page 127 of the Argument section for 35 U.S.C. 101."

4. In careful detail, Appellant demonstrated that the claims were correctly identified. The Appeal Brief says: "73..... all Claims 1-10, 12-19, 21, and 22 rejected under 35 U.S.C. 112 " below a heading of "**ARGUMENT REGARDING 35 USC §112 SECOND PARAGRAPH**". Therefore, the questions is "Were claims 1-10, 12-19, 21, and 22 rejected under 35 U.S.C. 112 second paragraph?". Exhibit "B" in the last communication did show that the Examiner previously wrote that "claims 1-10, 12-19, 21, and 22 rejected under 35 U.S.C. 112 second paragraph" in his rejection on page 27.

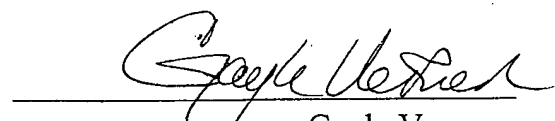

5. Appellant's October 22, 2002 response to the Examiner made deletion of the word "active"

6. Appellant responded to the Examiner previously and wrote ,  
"Appellant thanks the Examiner for this careful detail, but the Appellant notes that Dr. Mallove's quotes from Appendix B were cited in context on pages 28 through 29 and 129 through 130 in the Appeal Brief. Perhaps the Examiner missed this, and therefore, the Appellant has corrected this for the Examiner."

  
Gayle Verner

I declare under penalty of perjury that the foregoing is true and correct.

EXHIBIT "B"

October 22, 2002

**Applicant's Response To  
The Communication Of 7/22/02**

To Whom it Does Concern:

**AMENDMENTS OF CLAIMS AND SPECIFICATION**

In response to the Office communication dated 7/22/02 (cover as Exhibit A, attached), please amend the above-identified application as follows:

**In The Specification**

In response to the Office action of 7/22/02, please amend the above-identified application as follows, in response to, and to fully and completely comply with, the Examiner.

Please add to the U.S. PATENT DOCUMENTS on page 3 the following additional references.

09/573,381 05/19/2000 Swartz, M. ---

## COMMENTS ON THE AMENDMENTS AND REMARKS

9. For the convenience of, and at the request of, the Examiner, the Amendments also appended.

In all cases of amendment, there is no new material added. The changes were only made in response to the comments of the Examiner, the wording and scope of the changes maintains the wording and scope of the original disclosure. The new claims and amendments are strictly composed of the language of the specifications and claims of the original disclosure. In each case, wording and scope of the addition maintains the wording and scope of the original disclosure.

10. Based upon the Examiner's comments the claims of record have been rewritten and amended as new claims 1-10, 12-19, 21 and 22 which fully and completely distinguish the invention over the cited references. These claims respectfully are submitted and are patentable over the cited references because:

i) the claims recite novel structure and thus are distinguished physically over every reference [Sec. 102], and

ii) said physical distinction effects new and unexpected results, thereby indicating that said physical distinction is unobvious [Sec. 103].

'765 teaches a two-stage process involving loading of hydrogen into a metal electrode such as palladium, and extraction of product using an inhomogeneous magnetic field intensity. Applicant taught using a first stage of electrode loading, followed by, a second stage of sudden rapid ("catastrophic") flow of the loaded hydrogen within the metal. Applicant taught in the original specification and claims how this apparatus works and presented objective detailed evidence of the invention. The first stage is the electrode loading, and then, in the second stage a rapid ("catastrophic") flow of hydrogen results within the metal. After the initial loading, said flow (or flux) of hydrogen takes place (pages 15-16,19-22,28,33-34; S.N.07/760,970) until the previously-loaded palladium is spent of its deuterons or the material is otherwise damaged.

Claim 4 has been amended as follows:

4. (Amended) In a process using an isotopic fuel loaded into a material, a two-stage method for controlling the loading which includes in combination:

~~supplying said isotopic fuel into said material,~~

~~providing means for loading said isotopic fuel into said material to saturate said material,~~

then providing means for producing a change in the ~~active~~ quantity of said isotopic fuel within said material,

creating thereby a catastrophic diffusion flux of said isotopic fuel within said material.

4. (Corrected) In a process using an isotopic fuel loaded into a material, a two-stage method for controlling the loading which includes in combination:

loading said isotopic fuel into said material,

then providing means for producing a change in the quantity of said isotopic fuel within said material,

creating thereby a catastrophic diffusion flux of said isotopic fuel within said material.

Claim 6 has been amended as follows:

6. (Amended) A method as in claim 4 wherein second material loaded isotopic fuel is a member of the group consisting of deuterium or deuterons.

6. (Corrected) A method as in claim 4 wherein loaded isotopic fuel is a member of the group consisting of deuterium or deuterons.

Claim 8 has been amended as follows:

8. (Amended) A method as in claim 4, where the said means to produce a change in the ~~active~~ quantity of said isotopic fuel within said material is by a change in temperature of said material.

Claim 12 has been amended as follows:

12. (Amended) A method as in claim 10 wherein said means of removing said product utilizes an applied spatially inhomogeneous magnetic field.

12. (Corrected) A method as in claim 10 wherein said means of removing said product utilizes an applied spatially inhomogeneous magnetic field.

Claim 13 has been amended as follows:

13. (Amended) An apparatus to produce a product using a material loaded with an isotopic fuel, which includes in combination:

- means to supply said isotopic fuel to said material,
- means to load said isotopic fuel into said material to saturate said material,
- means to produce a change in the active quantity of said isotopic fuel within said material,
- means thereby to produce a catastrophic diffusion flux of said isotopic fuel within said material,
- means thereby to produce said product.

13. (Corrected) An apparatus to produce a product using a material loaded with an isotopic fuel, which includes in combination:

- means to load said isotopic fuel into said material,
- means to produce a change in the quantity of said isotopic fuel within said material,
- means to produce a catastrophic diffusion flux of said isotopic fuel within said material,
- means thereby to produce said product.

Claim 19 has been amended as follows:

19. (Amended) An apparatus as in claim 13 wherein the means produce a change in the active quantity of said isotopic fuel within said material is by a change in temperature.

19. (Corrected) An apparatus as in claim 13 wherein the means produce a change in the quantity of said isotopic fuel within said material is by a change in temperature.

Claims 21 and 22 have been added as follows:

21. A method as in claim 1, where the additional step is taken of removing said product produced.

22. A method as in claim 21 wherein said means of removing said product utilizes an applied spatially inhomogeneous magnetic field.
